

(a) Split proxy W into blocks; hold a group out

held out

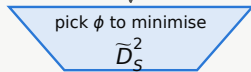

$2^7 - 2 = 126$ groups in all

(b) Learn Z from X and the kept blocks

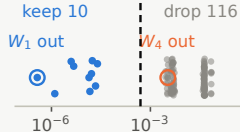

$W_2, \dots, W_7$ and X

Z

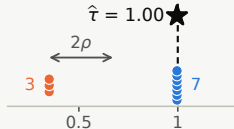

never sees the held-out group

(c) Given Z , does the held-out group still predict A ?

$\tilde{D}_S^2$ per group; keep below t

(d) Repeat; the largest agreeing group gives $\hat{\tau}$

one dot per group; dashed τ
