

(a) SCM-1 to SCM-3: W_5 acts on A and shifts W_4; noise pads (X, W) to dimension 8, 88, 1,312

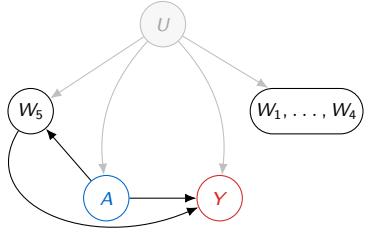

(b) Shapes3D: the graph of SCM-1, each proxy value shown as one image

(c) IHDP: U a hidden real covariate, associated (dashed) with the other 24 in X; $Y(0)$, $Y(1)$ from the benchmark

(d) Chest X-ray, response: the mark in W_5 follows $U - \kappa A$ plus noise

(e) Chest X-ray, mediator: the mark in W_5 is caused by A and carries half of the effect to Y
